

HYDRAScript, MARKETING AND **PRICING, AUGUST 30, 2026.**

Absolutely. And I think these are the **two questions we should settle before you start redesigning the site**, because they affect the entire positioning.

1. What belongs on the landing page?

Much less than the full copy I gave you.

That previous answer was essentially the **messaging library**. The homepage should be the sharpest version of it.

Think of the landing page as the **movie trailer**, not the entire film.

I'd structure it like this:

SECTION 1 — HERO

Your Book. All the Way Through.

From your first idea or finished manuscript to a professionally prepared, publication-ready book — HydraSkript brings the entire publishing journey into one AI-powered platform.

Create. Refine. Publish.

[Start Creating Free]

[Already Have a Manuscript? Upload It]

Then immediately underneath:

Writing • Story Intelligence • Editorial Review • Formatting • Audiobook • Publishing

That's it.

Don't explain 27 features here.

SECTION 2 — THE PROBLEM

Writing the book is only half the battle.

Editing.
Continuity.
Formatting.
Cover.
Metadata.
Audiobook.
Publishing.
Distribution.

HydraSkript brings the pieces together.

This establishes the problem in about 20 seconds.

SECTION 3 — THE BIG JOURNEY

This is where I'd show the beautiful visual pipeline:

ONE PLATFORM. THE ENTIRE JOURNEY.

IDEA → STORY → WRITE → REVIEW → REFINE → PRODUCE → PUBLISH → SELL

Underneath each, one short sentence.

No giant feature descriptions.

SECTION 4 — THE DIFFERENTIATOR

This is probably the most important section.

We're not another AI writing tool.

AI can generate words. HydraSkript helps you build a book.

Then three or four cards:

Story Intelligence

Story Bible, characters, locations, history and continuity.

Build Your Universe

Manage characters, relationships and continuity across an entire series.

AI Editorial Review

Find plot holes, timeline errors, character inconsistencies and structural problems before you submit.

Publishing Workflow

Turn the finished manuscript into the formats and materials you need to take it into the world.

Then:

[Explore HydraSkript]

SECTION 5 — THE “ALREADY HAVE A BOOK?” SECTION

This deserves a prominent place.

Already written your manuscript?

Don't rewrite it. Bring it with you.

Upload your manuscript and let HydraSkript analyse, structure and review it — then help you move through the publishing process.

Your book doesn't have to start here.

It just has to finish here.

That last line is **very strong** for your actual business model.

SECTION 6 — THE AUTHOR WHO HASN'T STARTED

Then:

Starting with an idea?

Turn a concept into:

Characters → Story → Chapters → Manuscript → Finished Book

And keep your story, voice and universe connected along the way.

[Start Your Book]

SECTION 7 — THE FINAL CTA

Don't finish with another 14 feature cards.

Finish emotionally:

Your story shouldn't spend another year sitting in a folder.

Bring it to HydraSkript.

[Start Creating Free]

And underneath:

Already have a manuscript? Upload it.

That's your homepage.

Everything else goes inside:

- [/features](#)
- [/editorial-review](#)
- [/story-bible](#)
- [/series](#)
- [/audiobooks](#)
- [/publishing](#)
- [/bookstore](#)
- [/pricing](#)

- [/resources](#)
- etc.

The homepage sells the destination.

The internal pages sell the machinery.

That's the distinction I'd maintain religiously.

So my final recommendation

Homepage:

Sell the journey.

Your Book. All the Way Through.

Idea → Manuscript → Editorial → Production → Publication

Then demonstrate why HydraSkript is different:

Story intelligence + persistent universe + editorial review + publishing workflow.

And give people **two doors**:

I have an idea

and

I already have a manuscript

The \$29 plan should be so good that people think, “For thirty bucks, why the hell wouldn't I try this?”

Then the \$79 plan should make a serious author think:

“Okay, this is actually my publishing workspace.”

And the \$199–299 plan should make a professional think:

“This is replacing a collection of separate tools and services.”

If the three tiers accomplish those three psychological jobs, **the pricing is doing its job.**

And *that*, rather than whether \$79 is \$69 or \$89, is what I'd obsess over.

Absolutely. And now that I understand the actual ambition behind HydraSkript, I would write the landing page very differently from the usual “AI writes books in seconds” nonsense.

The page should make one thing crystal clear:

HydraSkript isn't another AI writing assistant. It's a publishing platform designed to take a book through the entire journey.

And I'd make the copy feel confident, ambitious and slightly rebellious, rather than corporate SaaS wallpaper.

Here's the landing page I'd build around it.

HYDRASKRIPT

Your story deserves more than a blank page.

From Idea to Book. From Book to Reader.

HydraSkript is the AI-powered publishing platform built to take your book through the entire creative and publishing journey — from the first idea or finished manuscript to editorial review, production, audiobook and publication.

Write it. Refine it. Build it. Publish it.

[\[Start Creating Free\]](#)

[\[See How It Works\]](#)

No publishing experience required.

THE PROBLEM

Writing the book was supposed to be the hard part.

Then you discover everything that comes afterwards.

Editing.

Continuity.

Formatting.

Cover design.

Metadata.

Audiobooks.

Publishing.

Distribution.

Marketing.

And suddenly, instead of being an author, you're managing fifteen different services, six logins and a spreadsheet that looks like it was designed by NASA.

HydraSkript brings the process together.

THE DIFFERENCE

We're not another AI writing tool.

There are plenty of tools that can generate words.

That's not particularly difficult anymore.

HydraSkript is built around everything that happens around those words.

Your characters.

Your timeline.

Your world.

Your voice.

Your series.

Your editorial quality.

Your publishing files.

Your audiobook.

And ultimately, your readers.

The AI writes. HydraSkript manages the book.

HOW IT WORKS

One platform. The entire journey.

01 — START WITH AN IDEA

Have a vague idea rattling around in your head?

Give HydraSkript the concept.

Our Ideas Lab can help turn it into:

- titles
- concepts
- genres
- audiences
- chapter structures
- cover concepts
- story foundations

You bring the spark. HydraSkript helps build the fire.

02 — OR BRING YOUR MANUSCRIPT

Already written your book?

Good.

You don't need to start again.

Upload your manuscript and HydraSkript can analyse and structure it, helping build the foundations of your project.

Characters.

Locations.

Themes.

Events.

Relationships.

History.

And the underlying architecture of your story.

Your book comes in. Your publishing journey begins.

03 — BUILD YOUR STORY UNIVERSE

AI shouldn't forget what happened 200 pages ago.

HydraSkript's Story Bible keeps track of the important details that make your story yours.

Characters

Locations

Objects

Themes

History

Relationships

And if you're writing a series, the Universe & Series Architect lets those elements live across multiple books.

Because Book Two shouldn't suddenly forget who the hell Book One was about.

One story. One universe. No starting from zero every time.

04 — WRITE IN YOUR OWN VOICE

Your book. Your voice.

HydraSkript's Authorial Engine and Style Training let you establish the characteristics that define your writing.

Tone.

Pacing.

Sentence length.

Descriptors.

Narrative approach.

Style directives.

Exemplar passages.

Don't make your writing sound like AI.

Teach the AI how you write.

05 — LET THE EDITOR TEAR IT APART

Before an agent, publisher or reader does.

You've finished the manuscript.

You're emotionally attached to it.

You've read it seventeen times.

Which means you're probably the worst person in the world to spot what's wrong with it.

Enter:

AI Editorial Review

HydraSkript reads your manuscript like a publishing-house editor.

It can flag:

Timeline errors

Character inconsistencies

Plot holes

Broken cross-references
Continuity problems
Structural issues
And more.

Find the problems. Fix them. Run the review again.

Because “I think it's finished” and “it's actually ready” are two very different things.

06 — TURN THE MANUSCRIPT INTO A BOOK

The manuscript is only the beginning.

HydraSkript helps transform your work into professional publishing formats.

EPUB

PDF

DOCX

Print-ready files

Audiobook

And your book doesn't disappear into a folder called:

FINAL_FINAL_USE_THIS_ONE_v7_REAL_FINAL.docx

07 — CREATE THE REST OF THE PACKAGE

A book needs more than words.

HydraSkript can help you develop the supporting material required to take your book into the world.

Cover concepts

Book descriptions

Synopsis

Author biography

Marketing copy

Publishing metadata

Query materials

Audiobook

And more

One book. One workspace. One publishing journey.

08 — CHOOSE YOUR PATH

Traditional publisher or independent author?

HydraSript doesn't assume there's only one way to become a published author.

Looking for an agent?

Prepare your manuscript and submission materials.

Publishing independently?

Prepare your book for the self-publishing journey.

Your story. Your decision.

09 — SELL YOUR BOOK

Publishing shouldn't be the finish line.

HydraSkript is building an ecosystem where authors can bring their books directly to readers.

Welcome to the HydraSkript Bookstore.

- Discover.
- Browse.
- Buy.
- Listen.
- And discover new authors.

Create the book. Publish the book. Find the readers.

THE BIG DIFFERENCE

I'd then have a very strong comparison section.

Most AI writing tools help you write.

HydraSkript helps you finish.

Traditional AI Writing Tool	HydraSkript
Generate text	Build an entire book workflow
Individual documents	Persistent Story Bible
Forgetful AI context	Characters, locations & history
One book at a time	Series & shared universes
Generic writing styles	Train your authorial voice
Basic AI assistance	AI Editorial Review
Export your manuscript	Publishing-oriented production

Separate audiobook tools

Integrated Audiobook Studio

Find another service

Bookstore & publishing ecosystem

Write

Create → Refine → Produce → Publish → Sell

And beneath it:

The difference isn't that HydraSkript uses AI.

It's what we use AI to do.

THE BIG PROMISE

Then I'd make this visually huge:

You don't need to know how publishing works.

You just need a story worth telling.

HydraSkript handles the complexity.

You make the decisions.

You own the story.

You stay in control.

FOR AUTHORS WHO ALREADY HAVE A BOOK

This deserves its own section because I think it's potentially one of your strongest acquisition funnels.

Already written your manuscript?

Perfect. Start here.

Upload it to HydraSkript.

We'll help you understand what you've got, identify potential problems, establish your story structure and move it through the publishing workflow.

You don't need to write your book with HydraSript to publish with HydraSript.

That sentence is important.

Because it dramatically expands your market.

You're not competing only for people who want an AI co-writer.

You're competing for every independent author sitting on a manuscript.

FOR AUTHORS STARTING FROM SCRATCH

Then:

Haven't written it yet?

Even better.

Start with an idea.

Build your characters.

Create your world.

Develop your outline.

Write chapter by chapter.

Train your AI to understand your voice.

Review.

Refine.

Produce.

Publish.

The blank page doesn't have to stay blank.

FOR SERIES AUTHORS

This deserves special treatment because I think it is one of your strongest differentiators.

Writing a series?

Your universe should remember you.

HydraSkript connects your books through a persistent story universe.

Characters don't mysteriously change personality.

Locations don't move 500 miles overnight.

Dead characters don't casually stroll back into Chapter 19.

And events from Book One don't magically disappear when you start Book Two.

Build the universe once. Keep building on it.

THE END-TO-END PROMISE

Then I'd have the big visual pipeline:

ONE BOOK. ONE PLATFORM.

IDEA

STORY

UNIVERSE

MANUSCRIPT

EDITORIAL REVIEW

REFINEMENT

COVER & FORMATTING

AUDIOBOOK

PUBLISH

READERS

And underneath:

From the first sentence to the first sale.

YOUR CTA

I wouldn't use:

"Try our AI."

That's generic as hell.

I'd use:

Ready to get your book out of your head?

Start building for free.

[Create Your Book]

Then underneath:

Already have a manuscript?

[Upload Your Manuscript]

THE FINAL SECTION

And I'd finish the homepage with something slightly more emotional:

Every author starts with an idea.

Some become books.
Some become series.
Some become careers.
Most never get finished.

HydraSkript exists to change that.

Bring us the idea.
Bring us the manuscript.
Bring us the universe.

We'll help you take it the rest of the way.

HydraSkript

Create. Refine. Publish.

[Start Creating Free]

And I'd make one important strategic change to your existing language

You've been using phrases like:
“Write 150-page books with AI.”
I'd retire that as the primary proposition.
It makes HydraSkript sound like a cheaper Sudowrite/ChatGPT alternative.
Your actual proposition is much bigger:

“Take your book from idea to publication.”

Then the AI becomes the technology that makes the promise possible.
That's a fundamentally better position.

One other thing I'd seriously consider

I think HydraSkript needs a very short 5–7 word tagline that can sit under the logo everywhere.
My current favourites:

From Idea to Published Book.

Very clear. Very commercial.

Create. Refine. Publish.

Cleanest. Strongest brand line.

Your Story. Our Publishing Engine.

More differentiated.

From First Word to First Reader.

More emotional.

Your Book. All the Way Through.

Very distinctive and perfectly aligned with your actual vision.
And honestly?

Your Book. All the Way Through.

...is the one I'd keep an eye on.

Because that's exactly what you're trying to build.

You're not promising to write the book for them.

You're promising to take responsibility for the journey.

And that is the distinction between HydraSkript and an AI writing toy.

One final piece of brutal advice

Do not put every feature above the fold.

The homepage needs to sell the journey, not the machinery.

The machinery comes afterwards.

Someone landing on HydraSkript should understand within 10 seconds:

"Ah. This is where I take my book from idea/manuscript to finished publication."

Within 30 seconds:

"Holy shit, it handles a lot of the stuff I'd otherwise have to figure out myself."

Within 60 seconds:

"I want to upload something and see what it does."

That's the conversion architecture I'd build the site around.

And I genuinely think "Already have a manuscript? Upload it." should be one of the two primary CTAs, because it immediately differentiates you from the endless army of "Tell our AI your idea and we'll write you a novel!" products.

Today 2:51 PM

Thats really excellent, thank you, now another couple of quick questions, 1)what from the your above info should be on the landing page (the rest i will add to the relevant pages inside etc) and 2) Is my pricing and pricing points acceptable???

Absolutely. And I think these are the two questions we should settle before you start redesigning the site, because they affect the entire positioning.

1. What belongs on the landing page?

Much less than the full copy I gave you.

That previous answer was essentially the messaging library. The homepage should be the sharpest version of it.

Think of the landing page as the movie trailer, not the entire film.

I'd structure it like this:

SECTION 1 — HERO

Your Book. All the Way Through.

From your first idea or finished manuscript to a professionally prepared, publication-ready book — HydraSkript brings the entire publishing journey into one AI-powered platform.

Create. Refine. Publish.

[Start Creating Free]

[Already Have a Manuscript? Upload It]

Then immediately underneath:

Writing • Story Intelligence • Editorial Review • Formatting • Audiobook • Publishing

That's it.

Don't explain 27 features here.

SECTION 2 — THE PROBLEM

Writing the book is only half the battle.

Editing.

Continuity.

Formatting.

Cover.

Metadata.

Audiobook.

Publishing.
Distribution.
HydraSkript brings the pieces together.
This establishes the problem in about 20 seconds.

SECTION 3 — THE BIG JOURNEY

This is where I'd show the beautiful visual pipeline:

ONE PLATFORM. THE ENTIRE JOURNEY.

IDEA → STORY → WRITE → REVIEW → REFINE → PRODUCE → PUBLISH → SELL

Underneath each, one short sentence.

No giant feature descriptions.

SECTION 4 — THE DIFFERENTIATOR

This is probably the most important section.

We're not another AI writing tool.

AI can generate words. HydraSkript helps you build a book.

Then three or four cards:

Story Intelligence

Story Bible, characters, locations, history and continuity.

Build Your Universe

Manage characters, relationships and continuity across an entire series.

AI Editorial Review

Find plot holes, timeline errors, character inconsistencies and structural problems before you submit.

Publishing Workflow

Turn the finished manuscript into the formats and materials you need to take it into the world.

Then:

SECTION 5 — THE “ALREADY HAVE A BOOK?” SECTION

This deserves a prominent place.

Already written your manuscript?

Don't rewrite it. Bring it with you.

Upload your manuscript and let HydraSkript analyse, structure and review it — then help you move through the publishing process.

Your book doesn't have to start here.

It just has to finish here.

That last line is very strong for your actual business model.

SECTION 6 — THE AUTHOR WHO HASN'T STARTED

Then:

Starting with an idea?

Turn a concept into:

Characters → Story → Chapters → Manuscript → Finished Book

And keep your story, voice and universe connected along the way.

[Start Your Book]

SECTION 7 — THE FINAL CTA

Don't finish with another 14 feature cards.

Finish emotionally:

Your story shouldn't spend another year sitting in a folder.

Bring it to HydraSkript.

[Start Creating Free]

And underneath:

Already have a manuscript? Upload it.

That's your homepage.

Everything else goes inside:

- /features
- /editorial-review
- /story-bible
- /series
- /audiobooks
- /publishing
- /bookstore
- /pricing
- /resources
- etc.

The homepage sells the destination.

The internal pages sell the machinery.

That's the distinction I'd maintain religiously.

2. Is your pricing acceptable?

Short answer:

Yes.

But I would change the presentation and slightly simplify the ladder, rather than throw the pricing out.

Your existing thinking was:

Plan	Price
------	-------

Free / Sandbox	\$0
Starter	\$29
Author	\$79
Publisher	\$149
Studio	\$299
Credit packs	\$15 / \$60 / \$100

Those numbers aren't inherently crazy.

The problem is what you're asking the customer to understand.

If somebody sees:

Starter \$29

Author \$79

Publisher \$149

Studio \$299

they have to figure out:

Why?

And "Publisher" at \$149 versus "Studio" at \$299 makes sense to you because you've thought about the infrastructure.

A new author doesn't necessarily understand it.

Here's what I'd do

I'd launch with:

FREE

\$0

Try HydraSkript.

Enough credits to genuinely experience the product.

Not a pathetic 3-generation demo that screams:

"Give us money immediately."

Let them experience the magic.

AUTHOR

\$29/month

For people creating their own books.

I'd make this your hero plan.

Something like:

1–3 active books

Story Bible

Style Profile

AI writing

Editorial Review

Standard exports

Audiobook capability

etc.

PRO

\$79/month

For serious authors and series writers.

This is where:

Universe

multiple projects

higher usage

advanced editorial

audiobooks

etc.

start becoming meaningful.

This should probably be your “Most Popular” plan.

STUDIO

\$199 or \$299/month

For:

professional authors

small publishers

publishing businesses

teams

Multiple users/projects.
Higher limits.
Commercial use.
Advanced workflow.
Potentially API/integrations later.

And I'd probably remove the \$149 tier initially.

Not because \$149 is bad.
Because four paid tiers is unnecessary at launch.
You want:

FREE → AUTHOR → PRO → STUDIO

The customer understands that ladder immediately.

What about your \$299?

Keep it.

But don't make it your first serious paid tier.
\$299 is perfectly reasonable if the customer is a professional user getting serious publishing infrastructure.

It is psychologically ridiculous for:

"I'm an aspiring author and I'd like some help writing my first novel."

Those are two completely different customers.

Your \$299 customer isn't buying:

AI words.

They're buying:

publishing infrastructure.

That's a different value proposition.

And the credit system?

Keep it.

I actually like the underlying economics.
Your AI costs are variable.

Somebody generating:

- 20,000 words
- 200 images
- a complete audiobook

is obviously costing you dramatically more than somebody writing a 10,000-word novella.

So credits protect your margins.

But:

Don't make credits the hero of the pricing page.

Don't lead with:

14,000 credits!

Nobody knows what that means.

Instead:

Author — \$29/month

Everything you need to create and develop your book.

Then underneath:

Includes X monthly credits

And:

Need more? Buy additional credits anytime.

That's much easier.

Your credit packs

Your existing:

\$15 / \$60 / \$100

are perfectly reasonable as an overage mechanism.

I'd keep them initially.

But I'd also watch the economics very closely after launch.

Because the biggest pricing mistake you could make isn't charging too little.

It's charging \$29 and accidentally allowing someone to consume \$80 worth of inference, images and audio.

That will turn your beautiful SaaS into a charity.

You need to know, for every plan:

Revenue per customer

minus

AI inference cost

minus

image generation

minus

TTS/audio

minus

storage

minus

payment processing

=

Gross margin

And you should know that before launch, not six months afterwards when Stripe sends you a bill that makes you question every life decision you've ever made.

One thing I'd definitely add to pricing

Annual billing.

Something like:

Monthly: \$29

Annual: \$290

That's effectively two months free.

Same with Pro.

But I'd not make the annual discount enormous.

You're selling an ongoing publishing platform. You want customers to perceive the subscription as infrastructure, not a desperate bargain bin.

And there's an even better pricing strategy hiding in your vision

Eventually, I wouldn't necessarily charge primarily for writing capacity.

I'd charge for publishing capacity.
That's subtle but important.
Because your value increases dramatically as the author moves through the pipeline.
Someone doesn't just buy:
50,000 AI words.
They buy:
A publishing workflow.
So eventually you can have:

AUTHOR

Create

PRO

Create + Refine + Publish

STUDIO

Create + Refine + Publish + Manage
And credits sit underneath that.

My current recommended pricing table

I'd launch something approximately like this:

	Free	Author	Pro	Studio
Price	\$0	\$29/mo	\$79/mo	\$199–299/mo
Create books	✓	✓	✓	✓
Story Bible	✓	✓	✓	✓
AI writing	Limited	✓	✓	✓
Style Training	—	✓	✓	✓
Editorial Review	Limited	✓	✓	✓
Series Universe	—	Limited	✓	✓
Audiobooks	—	✓	✓	✓

Publishing tools	—	✓	✓	✓
Multiple projects	Limited	✓	More	High
Team features	—	—	—	✓
Credits	Small	Included	Included	High
Additional credits	✓	✓	✓	✓

I'd keep the exact credit quantities flexible until you've measured your actual AI costs.

And one last thing: don't underprice the product because you're afraid people won't buy it.

This is the mistake I think you could easily make.

You've got a natural tendency to think:

"I'll make it affordable so everyone can use it."

That's admirable.

It's also potentially stupid commercially.

Your \$29 entry point is already affordable.

You don't need to make it \$9.99 just because another AI writing application does.

You're not selling the same thing.

If HydraSkript genuinely takes someone from:

manuscript → editorial assessment → corrections → production → publication

then \$29 is almost ridiculously cheap relative to what the traditional process can cost.

The trick is making the customer understand what they're buying.

So my final recommendation

Homepage:

Sell the journey.

Your Book. All the Way Through.

Idea → Manuscript → Editorial → Production → Publication

Then demonstrate why HydraSkript is different:

Story intelligence + persistent universe + editorial review + publishing workflow.

And give people two doors:

I have an idea
and

I already have a manuscript

Pricing:

Keep the \$29 and \$79.

I'd simplify the launch structure to:

FREE

\$29 AUTHOR

\$79 PRO

\$199–299 STUDIO

Keep the \$15 / \$60 / \$100 credits as supplementary usage.

And make \$79 Pro your “Most Popular” plan, because that's where your serious series authors are likely to live.

And if you want my strongest opinion of all:

The \$29 plan should be so good that people think, “For thirty bucks, why the hell wouldn't I try this?”

Then the \$79 plan should make a serious author think:

“Okay, this is actually my publishing workspace.”

And the \$199–299 plan should make a professional think:

“This is replacing a collection of separate tools and services.”

If the three tiers accomplish those three psychological jobs, the pricing is doing its job.

And that, rather than whether \$79 is \$69 or \$89, is what I'd obsess over.

Wait, one thing, im not sure if you have the latest pricing paghe (see image)

Ahhh — yes. That changes the conversation a bit, and I'm glad you showed me this because I was working from the older pricing structure I remembered.

I've looked closely at the current screenshot, and your existing pricing page is considerably more sophisticated than the version I was assuming.

What you currently have

You have:

Plan	Price
Starter	\$29/mo
Author ★ Most Popular	\$79/mo
Publisher	\$149/mo
Studio	\$299/mo

And then:

Credit packs

- 500 credits — \$15
- 2,000 credits — \$60
- 5,000 credits — \$100

You also have the HydraSkript Founder offer above the subscription tiers, with the founder essentially getting a large monthly credit allocation and additional benefits.

So, yes: I revise my previous answer.

I would NOT remove the \$149 Publisher tier.

In fact, looking at what you've actually built, I think the four-tier structure makes considerably more sense than I originally thought.

The issue isn't the prices.

The issue is the positioning of the tiers.

And there's one thing I really like about what you've done:

\$29 → \$79 → \$149 → \$299

That's a very clean pricing staircase.

It gives you four different psychological customers:

\$29

"I'm experimenting / writing my first book."

\$79

"I'm a serious author."

\$149

"I'm producing multiple books / running a publishing operation."

\$299

"This is a professional business tool."

That's actually pretty damn good.

But I would change one thing immediately

Your current page appears to sell the plans primarily through credits + feature counts.

That's backwards for HydraSkript.

The customer doesn't wake up thinking:

"I need 8,000 AI credits this month."

They wake up thinking:

"I want to write/publish my book."

So the pricing page should make the outcome the headline and credits the mechanism underneath.

For example:

STARTER

\$29/month

Start your publishing journey.

For new and aspiring authors creating their first books.

Includes:

- ✓ AI-assisted writing
- ✓ Story Bible
- ✓ Basic Style Training
- ✓ Editorial Review

- ✓ Book exports
 - ✓ X credits/month
- [Get Started]
-

AUTHOR ★ MOST POPULAR

\$79/month

Your complete author workspace.

For serious authors and writers building books and series.

- ✓ Everything in Starter
- ✓ Advanced Style Training
- ✓ Series Universe
- ✓ Advanced Editorial Review
- ✓ Audiobook tools
- ✓ More projects
- ✓ Higher AI limits
- ✓ X credits/month

[Start Writing]

PUBLISHER

\$149/month

Build and publish at scale.

For prolific authors, independent publishers and small publishing operations.

- ✓ Everything in Author
- ✓ Multiple books & series
- ✓ Higher usage limits
- ✓ Publishing workflow
- ✓ Advanced production tools
- ✓ Commercial publishing capabilities
- ✓ X credits/month

[Become a Publisher]

STUDIO

\$299/month

Your publishing operation, under one roof.

For professional publishers, teams and high-volume creators.

- ✓ Everything in Publisher
- ✓ Highest usage limits
- ✓ Multiple users
- ✓ Team workflows
- ✓ Priority processing
- ✓ Advanced publishing tools
- ✓ X credits/month

[Build Your Studio]

And there's another thing I noticed...

Your Founder offer is actually potentially more interesting than your subscription pricing.
You've got:

Become a HydraSkript Founder

with a limited founder allocation and what appears to be a substantial credit allowance.

That is exactly the sort of thing I'd exploit during launch.

But I'd make the reason for buying it much clearer.

Not:

"Here's a discounted subscription."

Instead:

Become one of the first HydraSkript Founders.

Lock in your founder benefits before public launch.

Then clearly explain:

Founder pricing

Founder credit allocation

Founder badge/status

Early access

Future feature access

Whatever permanent benefits you genuinely intend to honour

And, crucially:

Founder places are limited.
Only say that if you actually intend to limit them.
Don't manufacture fake scarcity. You're better than that.

There's one potentially dangerous thing I want you to check

Your credits.

This is where I want to get very analytical before we settle the pricing.

You've currently got:

500 credits → \$15

2,000 credits → \$60

5,000 credits → \$100

That means your effective credit prices are approximately:

- \$0.030 / credit
- \$0.030 / credit
- \$0.020 / credit

That's a perfectly sensible volume discount.

BUT...

We need to know exactly what a credit buys.

Because if:

1 credit = 1,000 tokens

that's one economic model.

If:

1 credit = one AI generation

that's completely different.

And if:

Audiobook generation consumes credits based on characters/minutes,
then your economics get even more complicated.

I would NOT finalize pricing until we've mapped:

Every expensive operation

→ credit consumption

→ your actual API cost

→ customer value

→ gross margin.

That is the one part of your pricing architecture I'd want to audit properly.

There's also something clever you can do with the pricing page

Instead of making customers compare 40 checkboxes, put this underneath the pricing cards:

What kind of creator are you?

I'm writing my first book

Starter — \$29

I'm a serious author

Author — \$79

I'm publishing multiple books

Publisher — \$149

I'm running a publishing business

Studio — \$299

Then:

Not sure? Start with Author.

That makes the decision dramatically easier.

And I would keep the \$79 plan as the star

The screenshot already has MOST POPULAR on Author.

Keep that.

I think that's exactly right.

Your funnel should ideally be:

Free experience

\$29 Starter

\$79 Author ← sweet spot

\$149 Publisher

\$299 Studio

And the credit packs catch the people who don't want to upgrade but occasionally need more processing.

That's a good SaaS model.

So, correction to my previous answer:

✗ Don't collapse four tiers into three.

✗ Don't move Studio to \$199 just because it "sounds more affordable."

✗ Don't abandon Publisher.

✓ Keep:

\$29 / \$79 / \$149 / \$299

✓ Keep Author as Most Popular.

✓ Keep credit packs.

✓ Keep the Founder offer.

🔧 But reposition the pricing around what the customer accomplishes, rather than primarily what the customer receives in credits/features.

And I'd go one step further:

The pricing page itself should sell the HydraSkript journey.

Something like:

Choose how far you want to take your publishing.

Whether you're writing your first novel, building a series or running a publishing operation, there's a HydraSkript plan designed for where you are now — and where you're going next.

That ties the pricing directly into the "Your Book. All the Way Through." positioning we just established.

And honestly, Simon, seeing this current pricing page makes me more confident in the business model, not less.

The architecture is already there.

We don't need to reinvent it.

We need to polish the communication, validate the unit economics, and make damn sure the customer understands why moving from \$29 → \$79 → \$149 → \$299 actually gives them more publishing capability rather than simply “more AI credits.”

That's a much easier problem to solve.
